

FCP X Organization

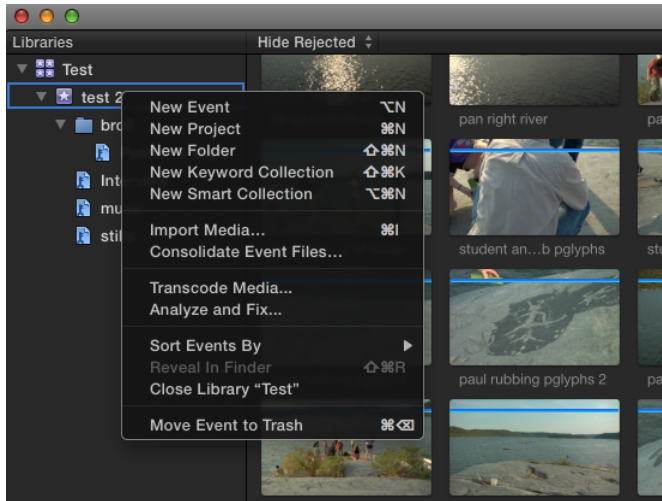

After creating a Library, Event, and Project you will then import media in the following way taking use of Keyword Collections upon import.

Your Event Library will now be organized as keywords.

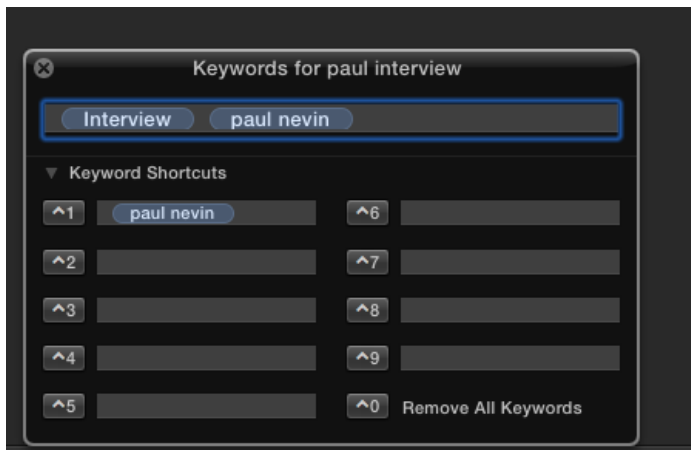

Can organize clips further by creating Folders. Example: create a b roll folder and then further organize your broll by person being interviewed. Highlight Event while holding shift key down to create a New Folder. You can do this with your interviews as well once they are added.

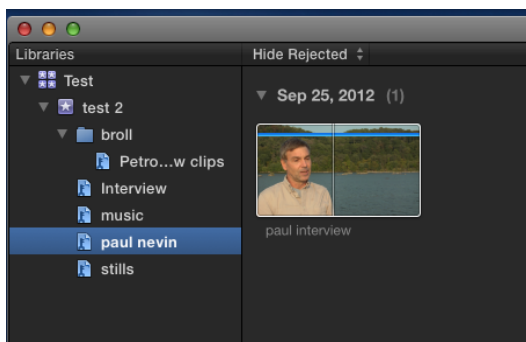

Now open interview keyword collection to further brand clips.
Click on a clip and then select the key icon to create a keyword.

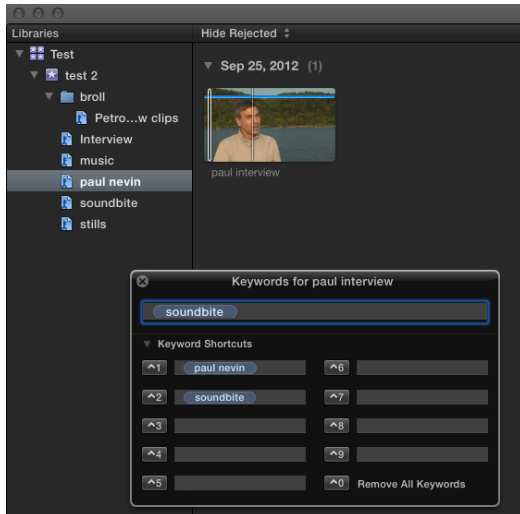

Add keywords such as person's name.

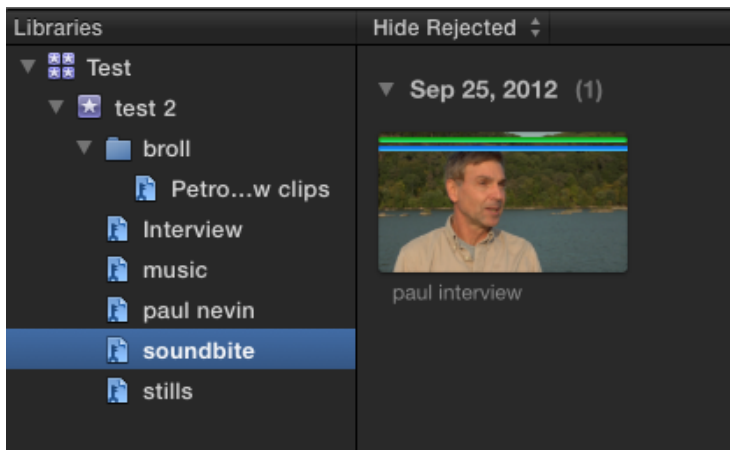

Now a keyword collection is created as that interviewees name. This creates multiple ways of looking at and finding clips.

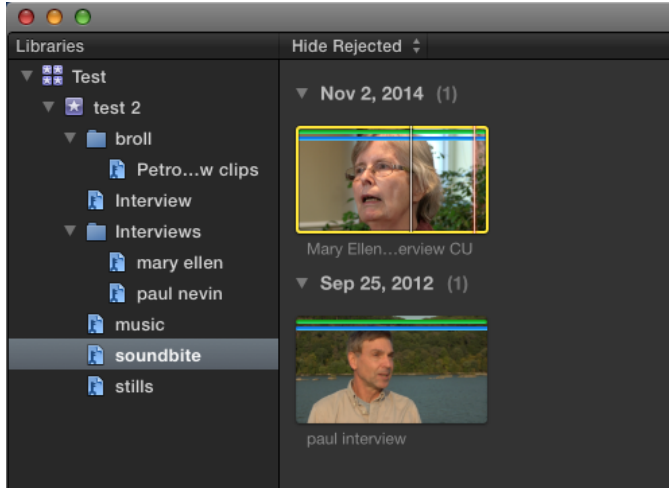

Now you can further breakdown interview “golden suggests” or sound bites that you have selected. Create in/out point in your interview clips and then Create a keyword called soundbite by clicking on the Key Icon. This soundbite will now be placed in the Keyword Collection called Soundbite. Keyword other soundbites of interviews to place them in this collection.

Now when I click on the keyword collection, Soundbite, there you see your selected “golden suggest” or soundbite.

Now to further organize your soundbites by interviewee, go into Soundbites and then select an interview soundbite, label it person's name followed by sound bite. Example: paul nevin soundbite. This will create another keyword collection. Keyword all of paul nevin's soundbites as this. Now you can create a folder called Soundbites and then place any paul nevin soundbites into this folder.

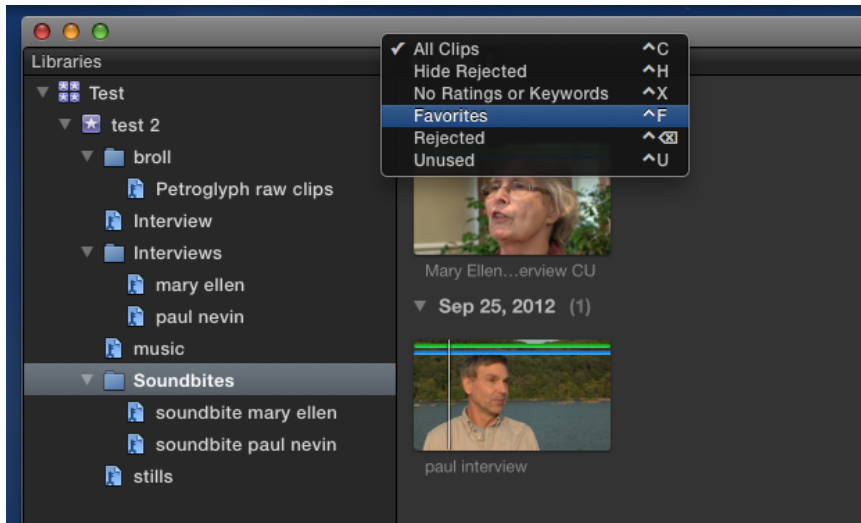

How to label soundbites?

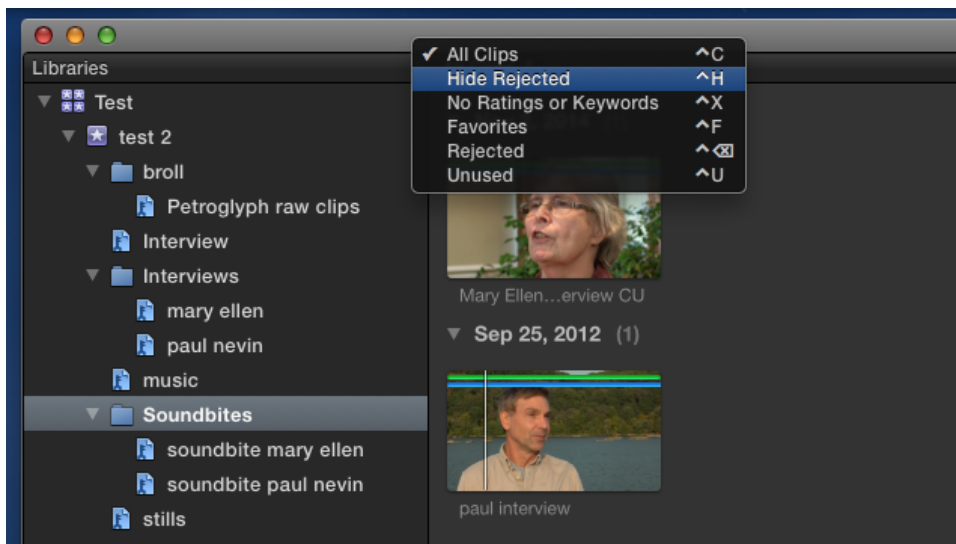

Favorites (green star), Remove Ratings (white star), and Reject Selection (red x) icons

Can organize these selections by selecting favorites, rejected, or unused.

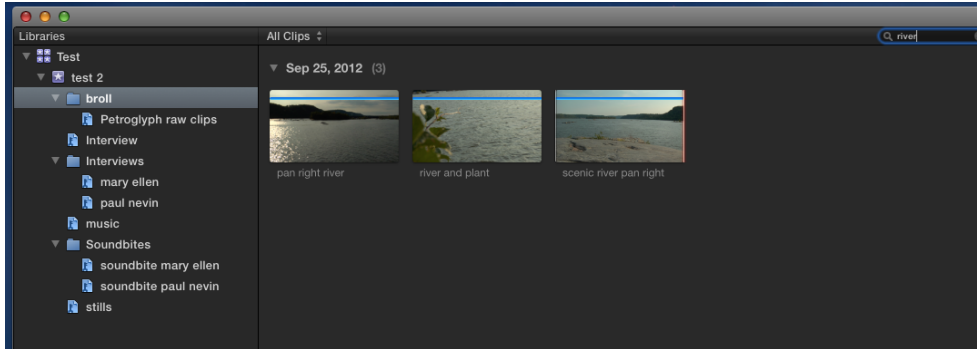

If you label a clip Rejected, you can hide these rejected clips from the browser by selected Hide Rejected.

Searching for Elements

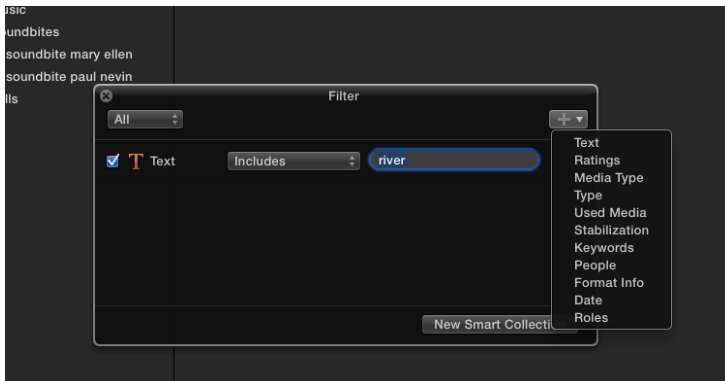

If I want to search in my broll for any images labeled river, I would just type River in the search criteria window and all clips labeled River will be displayed.

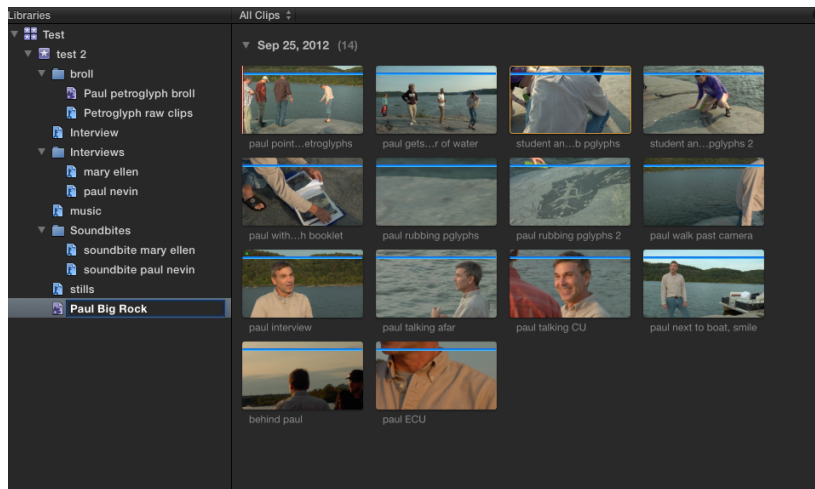

For a deeper search function, click on the magnifying tool in the search window and a search filter will appear.

Click on the + sign to add any other criteria for the search.

You can create a New Smart Collection containing selected criteria for your search and add to your library. The Smart Collection are identified as a purple icon in your event library.

Example: Danielle Lambert FA house tour.

You can gather Smart Collections and place them in a folder to further organize. Example if you have several Smart Collections of Danielle Lambert that comprise of broll. Create a folder called Danielle broll and place Smart Collections in the folder. Or create a folder that is labeled as Smart Collections and place all SC inside the folder.

Whenever any clips match this criteria, FCP X will automatically place them in the Smart Collection.

Displaying Event Data

You can display the browser in window in a variety of ways using your gear icon. Group clips by or Sort by. Grouping clips will have headings. Sorting clips will not.

00:00:00:00 | 00:00:15:00

Clips Tags Roles 1 item, 00:21:04 selected

Name	Position	Notes
tilt up rock t...	00:00:00:00	opening shot?

tilt up rock to sun

All Video Audio Titles

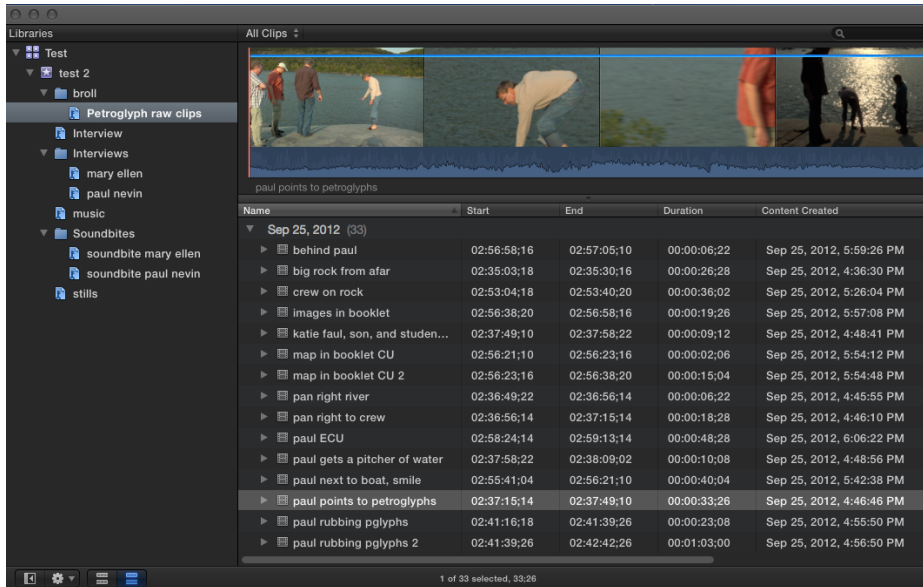

Film Strip View & List View

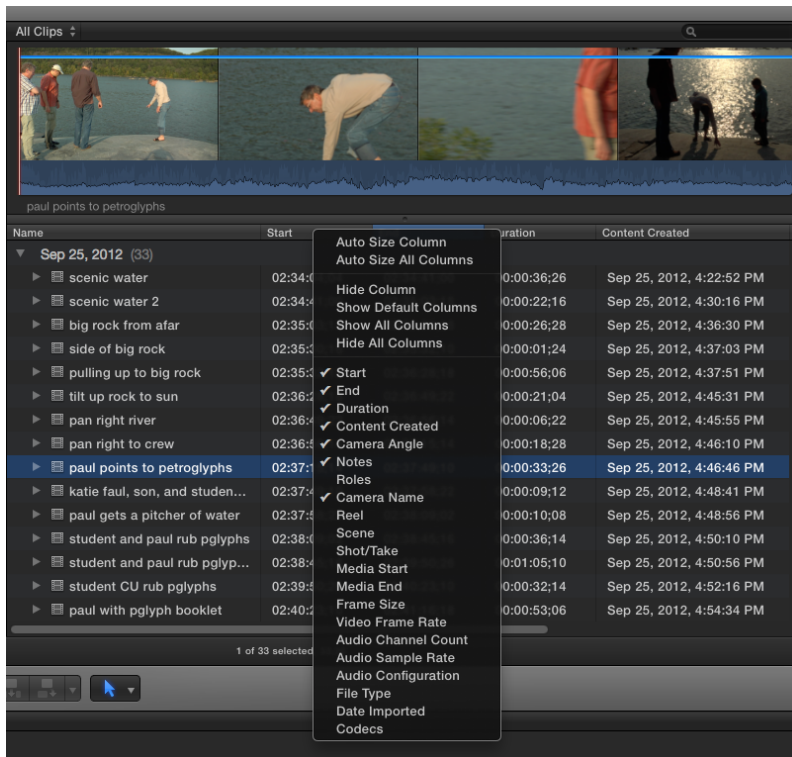

Film strip view can be stretched out to show duration of clip. That is all the information you will get in film strip view.

List view will give you additional information regarding the clips.

You can view additional information by pressing Control>Click while the cursor selects any of the categories above such as name, start, end, duration, content created, etc. You can move and relocate these headings to suite your organization preferences.

Can also leave notes about clips in the timeline by selecting your Timeline Index icon.

Subclipping Shots

You can subclip or pull out soundbites or “golden nuggets” by selecting list view. I can select my drop down arrow and rename my favorites clip to the soundbite title.
